As a software developer, I have developed several applications using React and Next.js. I am proficient in React's component based architecture and familiar with its ecosystem of tools and libraries. I am also well-versed in TypeScript, which allows me to write safer and more scalable code.

SKILLS

Javascript, Typescript, React, Next Js, Redux, React Query, Vue, Tailwind, shadcn

EXPERIENCE

Seha Studio

Present

At Seha Studio, I develop open-source projects and custom software solutions with a focus on modern frontend development, scalability, and user experience.

- Build custom web applications and reusable product components for different use cases.
- Contribute to open-source projects and independent product development.
- Deliver responsive, maintainable, and performance-oriented interfaces using modern web technologies.
- Handle development processes end-to-end, from concept and architecture to launch.

Alışgidiş - Frontend Developer

February 2025 – October 2025

At Alışgidiş, I am developing e-commerce solutions for both web and mobile platforms. My work focuses on creating scalable, user-friendly applications using cutting-edge technologies to enhance the online shopping experience.

- Developing robust web applications using Next.js & TypeScript.
- Contributing to cross-platform mobile app development.
- Utilizing shadcn/ui components for modern and intuitive

user interfaces.

- Implementing performance optimizations and responsive design principles across all platforms.

Gordion, Remote - Frontend Developer

December 2021 – January 2025

At Gordion, a company operating in the tourism sector, I contributed to the development of both B2B and B2C applications tailored to our users' needs. My role focused on delivering seamless and visually appealing user experiences using modern web technologies.

- Developed and maintained scalable B2B and B2C applications, ensuring optimal performance and user satisfaction.
- Leveraged technologies such as React, Next.js, and jQuery to build dynamic and responsive interfaces.
- Utilized shadcn and Tailwind CSS for efficient and customizable design implementations.
- Collaborated with cross-functional teams to deliver high-quality, user-focused solutions.
- Continuously improved existing systems, incorporating feedback and optimizing workflows to meet business goals.

- English (A2)

EDUCATION

Düzce University - Mathematics

PROJECTS

- [Git Score App](#): A tool that helps you track your Git contributions and see your progress over time .
- [tr-slugify](#): An npm package that correctly translates Turkish special characters and generates slugs for URLs.
- [prompt-trace](#): Local-first prompt optimization engine for AI-assisted development. Scans Cursor, Claude Code,

Codex CLI and 10+ tools, classifies prompts, scores quality, extracts reusable templates and workflow packs.

- [Ruh Bahçesi Kaçış Mobile Game](#): An independently developed mobile game built using **React Native (Expo)**. Includes custom UI components, animation-driven interactions, and optimized performance for iOS. Shipped to the App Store as a complete end-to-end mobile product.
